

Instruction for mounting Ramén KS Ball Sector Valves, DN25-300 in potentially explosive areas in conformity to Directive 2014/34/EU, ATEX.

Instruction

To avoid that a difference in electric potential is created we recommend that an extra earth connection is attached between the stem, body and piping.

This extra earthing can be done as described in Fig 1. Connecting points are:

1. Earth connection screw
2. Mounting bracket bolting
3. Flange bolting
